

Computer Science 212

Object-Oriented Programming in Java

Lab 21

Aim: Working with Java Files.

Create a new Eclipse project for Lab21.

Import the class *ListFiles* from Z:\Lab21, and look at the code (it was shown in lecture) and run the program.

Create a new class called *ListLargestFile* and cut and paste the code from *ListFiles* into this class.

Modify the class so that it finds the largest file in the chosen directory and subdirectories.

Run *ListLargestFile* and see that it terminates normally.
