Object-Oriented Programming in Java

Lab 16

Aim: Working with simple linked lists.

Create a Project for Lab 16 in Eclipse

Import the three files in the Z:\Lab16 directory (ListNode, LinkedList and Lab16Main).

Open all the files, read through Lab16Main and run the application Lab16Main.

Notice it doesn't do anything because the methods *append* and *prepend* are empty in the Class LinkedList.

Write these two methods, and demonstrate they are correct by running the main program again.
